

Learn more about opportunities in Washington State

Washington is redefining the state of healthcare worldwide. Our life sciences and global health organizations are dedicated to eradicating disease, improving the quality of life, finding new cures for once terminal conditions and giving people hope where there once was none.

If you want to do business in or with a state that cares deeply about the health and wellness of the world as well as the success of your organization, Washington is waiting to hear from you.

Call us at (206) 256-6100 or email us at moreinfo@choosewashington.com to learn more about life sciences/global health opportunities in Washington.

Washington State: Building Business Legends.

WASHINGTON STATE

CREATING HOPE, FINDING CURES.

Dedicated to new discoveries, revolutionary cures

From establishing the first hospital in the Northwest Territory in 1858 to today's pioneering breakthroughs in which the body's own immune system may be used one day to wipe out cancer, Washington State has advanced life sciences and global health for more than 150 years.

A passion for innovation combined with the know-how to take the latest advances and discoveries to market, sets Washington businesses apart. Life sciences and global health companies, educational institutions and organizations work in close collaboration, allowing the best and brightest ideas to rise to the top in our research labs, incubators and universities

Life saving devices and tests

Our ideas have been revolutionary at times, including perfecting the heart defibrillator, saving countless lives in the process; developing the Scribner shunt, which made long-term dialysis possible; and establishing the Bruce Protocol, the standardized

treadmill test for diagnosing and evaluating heart and lung disease.

In Washington, we just don't treat disease and illness. Our researchers and scientists are also dedicated to improving health conditions throughout the world. Nearly 200 organizations in the state are focused on promoting and improving global health through research, training, education and public awareness, including the Gates Foundation. This foundation alone has committed more than \$26 billion in grants, supporting global health initiatives in 100 countries.

Innovative, productive partnerships

Washington boasts more than 480 life sciences and global health organizations as well as two major research universities — the University of Washington and Washington State University. We also have one of only 10 federal laboratories in the nation, the Pacific Northwest National Laboratory in Richland, which employs 4,700 scientists, researchers and support staff.
